ROLLERDRIVE SERIES EC5000

Based on ø 50 mm, tapered, IP54, for -30 to 0 °C

35W

Application area

Drive for unit handling conveyor systems, such as transporting cardboard cartons, containers, platens or tires at normal ambient temperature. Suitable for roller/belt curves as well as constantly driven or zero pressure accumulation conveyor technology.

Compact design

The drive integrated in the tube allows a very compact design of the curve.

Very energy-efficient

The brushless drive features energy recovery when braking. The conveyor system can operate without pneumatics or conventional drives, which must be operated continually.

Robust design

In contrast to conventional designs, the tapered elements (gray and black) are secured against axial shifting. This safeguard prevents the tapered elements from shifting on the tube, similar to the matching conveyor rollers.

Flexible possible applications

RollerDrive is available in many variations, allowing it to be used in all types of different conveyor systems. For the user, this translates into a single interface instead of many. Depending on the application area, PolyVee or round belts can be used for the transmission of force. Nine gear ratios allow selecting the perfect pairing between speed and torque.

Low-noise

The use of decoupling elements achieves particularly low-noise running.

Maintenance-free and installation-friendly

The drive with internal commutation electronics does not require any maintenance. It features an overload protection that prevents damages due to overtemperature or blockage. It is connected securely without complex screw connection by using a motor cable with 5-pin snap-in plug.

Technical data

Rated voltage	24 V	48 V	
Power	50 W	50 W	
Rated current	3.4 A	1.7 A	
Starting current	7.5 A	3.8 A	
Max. noise emission (installed)	55 dB (A), application-dependent		
Length of motor cable	500 mm		
Max. reference length	1100 mm		
Ambient temperature in operation	-30 to 0 °C		
Maximum load capacity per RollerDrive without drive head	500 N		
Max. load capacity per RollerDrive with drive head (PolyVee or round belt)	350 l	N	
Motor shaft	Stainless steel, 11 mm HEX, thread M12 x 1		
Anti-static version	Yes (< 10 ⁶ Ω)		
Tube wall thickness	1.5 mm		
Tube material	Zinc-plated steel, stainless steel		
Tapered cones	1.8° in gray and b 2.2° in g

Before the run-in, the values may differ up to ± 20 %. After a run-in phase, the values vary only in the range of ± 10 % for 95 % of all RollerDrive used.

Dimensions

The minimum reference length depends on the gear box variant, the grooves in the tube and the drive or the bearing assembly. A sufficient axial play is already taken into account, so that the actual clear width between side profiles is required. A hexagon hole measuring at least 11.2 mm is recommended for fastening on the cable side. If the RollerDrive is inserted obliquely, the fastening hole must be designed larger accordingly. The fastening hole of the EC5000 on the opposite side depends on its version. When fastening using the hexagon spring shaft, a hexagon hole measuring at least 11.2 mm should also be planned. In case of a screw fastening, a drilled hole with a diameter of 8.5 mm should be planned.

Ordering dimensions for tube sleeves starting at page 99

- RL = Reference length/ordering length
- EL = Installation length, inside diameter between side profiles
- U = Usable tube length: length of tapered elements

BI

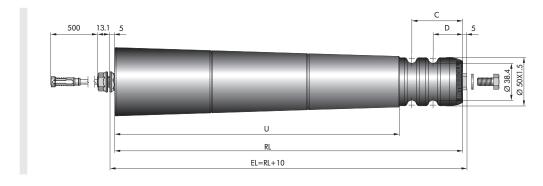

For higher surface of the tube with respect to the tapered elements, it is also possible to obtain different reference lengths. The specified minimum diameters refer to the smallest diameter of the first tapered element. The reference lengths 150 mm and 200 mm as well as 950 mm and 1000 mm do not receive an end cover.

Gray tapered elements with 2.2° are not shown, but they follow the dimensional specifications (RL/EL) of the 1.8° elements shown.

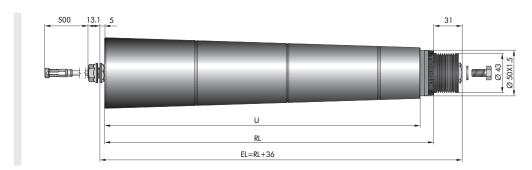

M8 female thread, without grooves

M8 female thread, with grooves

PolyVee drive head with M8 female thread/hexagon spring shaft*

* Fastening via hexagon spring shaft (shaft not tapered) is not shown here, but it follows dimensional specifications (RL/EL) of the female thread fastening solution shown.

Round belt drive head

Round belt drive head is not shown here, but it follows the dimensional specifications (RL/EL) of the PolyVee drive head with female thread.
